5-Market Preservative Compliance Checklist

Onerchemical · Preservation Regulatory Series · As of 2026-11

Eighteen items across submission docs, preservative-specific flags, and change-management SOP. Use this before any cross-border preservative dossier submission or supplier dossier audit. Each item names the canonical regulatory reference — verify against the regulator's live text, not against this checklist alone.

Section A · Submission documents (per market)

A1. EU CPSR (Cosmetic Product Safety Report) parts A & B assembled and signed by qualified Safety Assessor

Reg (EC) 1223/2009 Art. 10. Required before CPNP notification.

A2. EU CPNP (Cosmetic Products Notification Portal) notification complete

Frame formulation + preservative concentration + nanomaterial declaration + child-product tag.

A3. US MoCRA facility registration current (biennial renewal from Q1 2026)

Cosmetics Direct portal; foreign facility requires designated US Agent.

A4. US MoCRA product listing submitted for each cosmetic SKU distributed

Per 21 USC 364c; update within 60 days of any change.

A5. China NMPA ■■■■■■■ (ordinary cosmetic filing) with full ingredient disclosure

Via ■■■■■■■■■■■; CoA + Safety Assessment Report attached.

A6. Japan quasi-drug approval (if active claim) OR cosmetic notification

Quasi-drug via PMDA requires JSQI 2021 compliance (mandatory from 2026-10-01).

A7. Korea MFDS functional-cosmetic registration (if applicable) OR ordinary cosmetic report

■■■ ■■■■ Notice 2026-19; ■■■■ within 15 days of substantive change.

A8. 6-document stack present per market (CoA / SDS / Challenge Test / allergen declaration / INCI breakdown / change-notification SOP)

See Section 5 of the Pillar #3 article.

A9. Allergen labeling updated for EU 81-allergen rule (full application 2026-07-31)

0.001% leave-on / 0.01% rinse-off trigger.

A10. UK post-Brexit dossier maintained separately from EU dossier

UK Cosmetics Regulation SI 2013/1478 as amended; 16 new CMR substances added 2026-08-15.

Section B · Preservative-specific regulatory flags (2026-11)

B1. Butylparaben: child-product leave-on restriction confirmed (EU Omnibus Act IX, compliance 2027-02-01)

Annex V entry 12a → 12b. Audit all leave-on child SKUs before deadline.

B2. Zinc Pyrithione: China prohibition tracking (effective 2028-01-01)

NMPA Announcement No. 6 of 2026. Reformulate China SKUs before deadline.

B3. Formaldehyde releasers: EU labeling threshold compliance (0.001% from 2026-07-31)

Reg (EU) 2022/1181. Threshold dropped from 0.05% — audit all SKUs.

B4. Methylisothiazolinone: leave-on prohibition confirmed in EU/China/Korea; audit rinse-off/leave-on classification per SKU

Annex V entry 57 (EU); STSC Table 4 serial 51 (CN); MFDS Notice 2026-19 (KR).

B5. Phenoxyethanol: US California Prop 65 1,4-dioxane trace monitoring in place

Supplier CoA must include 1,4-dioxane field; synthesis-byproduct screening quarterly.

Section C · Change-management SOP (annual cadence)

C1. Monthly regulatory horizon scan logged (EU CeWay + US FDA Cosmetics + CN NMPA + JP MHLW + KR MFDS)

Flag every hit against affected product lines; file in supplier dossier.

C2. Quarterly supplier dossier review — pull latest CoA + SDS; verify no silent upstream change

Any CoA field drift triggers re-run of Challenge Test and supplier audit scorecard.

C3. Challenge Test re-validation scheduled annually per SKU (ISO 11930 / USP <51> / EP 5.1.3 / Japan Pharmacopoeia 4.06)

Budget USD 450-900 per SKU per year; triggered immediately on any formula/supplier/packaging change.
